PROFESSIONAL SUMMARY

MERN Stack Developer with a 3-month internship at Amdox and a track record of shipping production-grade applications. Built SIRP an AI-powered incident response platform with real-time Socket.IO dashboards (sub-50ms latency) and Google Gemini API integration and a multi-role job portal featuring JWT-based RBAC and MongoDB-indexed queries. Skilled in REST API development, Redis, Cloudinary, and secure backend architecture using Helmet and bcrypt.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript (ES6+), Redux, HTML5, CSS3, Tailwind CSS, SCSS, Framer Motion, GSAP, Three.js

Backend: Node.js, Express.js, REST API Design, Socket.IO, JWT, Redis, Multer, Helmet, bcrypt, CORS

Database: MongoDB (indexing, denormalized schema design), Firebase

Tools & Platforms: Git, GitHub, Postman, Vercel, Netlify, Cloudinary, MediaPipe, Figma

AI & Integrations: Google Gemini API, node-cron, Resend (email API), OTP workflows

Currently Learning: TypeScript, Docker, Jest (unit testing), CI/CD pipelines

WORK EXPERIENCE

Software Development Intern | **Amdox** | Kanpur, UP Jan 2026 – March 2026

- Developed 4+ full-stack MERN modules for internal web applications, contributing to features used by the core team in day-to-day workflows.
- Built 6+ responsive React.js UI components integrated with RESTful APIs, improving UI consistency and reducing frontend rendering issues.
- Designed and integrated REST APIs with MongoDB, implementing CRUD operations and authentication workflows that reduced manual data-handling steps by ~30%.
- Implemented JWT-based authentication, session management, and debugging pipelines; collaborated using Git and GitHub with a 4-member Agile dev team.
- Participated in daily standups and sprint reviews, delivering assigned modules within planned sprints.

PROJECTS

SIRP – Smart Incident Response Platform **Hackathon Project** | **Team of 4** | **Role: Full Stack**

Tech Stack: MERN, Socket.IO, Google Gemini 1.5 Flash, node-cron, Resend, Cloudinary, Redis

- Architected and led backend development of an AI-powered incident management platform, reducing manual incident triage time by ~60% through automated AI-based detection and assignment workflows.
- Integrated Google Gemini API for structured log analysis and AI-based incident classification, processing logs with structured JSON output for downstream automation.
- Built real-time incident dashboards using Socket.IO achieving sub-50ms live update latency, supporting concurrent monitoring for 10+ active incidents simultaneously.
- Implemented layered security: JWT authentication, OTP email verification via Resend, RBAC, and secure httpOnly cookie-based sessions — zero auth-related vulnerabilities in testing.
- Designed automated engineer assignment logic, incident lifecycle state machine, and public status page reducing manual status communication effort by ~70%.
- Developed analytics dashboards surfacing MTTR (Mean Time to Resolve) and incident frequency metrics for team leads.

Job Listing Portal

Tech Stack: MERN, JWT, SCSS, React Context API, Helmet, bcrypt, MongoDB Indexing

- Built a full-stack job marketplace platform supporting 2 user roles (Employer and Job Seeker) with separate dashboards and protected routing architecture.
- Implemented role-based JWT authentication with secure httpOnly cookies, achieving zero session-hijacking vulnerabilities in internal testing.
- Developed complete job lifecycle: CRUD operations, resume upload via Multer, application tracking system, and multi-criteria job filtering — reducing search time for end users.
- Applied MongoDB indexing and denormalized schema design, improving average query response time by ~40% compared to non-indexed baseline.
- Secured backend with Helmet, rate limiting, CORS protection, and bcrypt password hashing hardening against common OWASP Top 10 vulnerabilities.

EDUCATION

Bachelor of Arts (BA) | P.S.P.T. College, Kanpur

Expected May 2026

Relevant self-study: Full-Stack Web Development, Data Structures, System Design Fundamentals

Intermediate (CBSE Board) | Kanpur

2023

CERTIFICATIONS

AI-Powered MERN Stack Development — Sheryians Coding School

Expected June 2026

Full-Stack Web Development — ASDC Kanpur

2026
